

## SEMI AUTOMATIC CAPSULE ORIENTATING and FILLING MACHINE

### KAP-100

Kap 100 capsule filling setup has been developed to meet the needs of little production. Kap 100 opens, fills and closes 100 capsules per cycle and it is composed of the following parts:

- capsule inserter
- capsule filler

Kap 100 is suitable to operate standard capsules for sizes ranging from 00 to 4 in batches of 100 capsules per operation. The machine is supplied complete of all accessories to operate with one size of capsule and, on request, all accessories to operate with other capsules size can be supplied. The machine is supplied with AISI 304 stainless steel base plate and parts in contact with capsules in anodized aluminium.

The average production of the machine is 2500 capsules per hour, depending on the operator.

**The machine electric power is at 230 Volts with dedicated and separated transformer and distribution at 24 Volts (on machine board).**

**The stainless steel box containing the electrical parts is complete of electromagnetic and vibrating system, it is fully dismantled and 100% at water tight. For this reason, the machine can be washed and rinsed in the internal part by assuring a good cleaning as per the GMP rules.**
